

## PROTECTIVE COATING SERVICES

**Corrosion costs to industry worldwide account for approximately 3% of gross domestic product. Corrosion control through protective coatings provides a cost effective solution to minimise corrosion damage and loss of profits.**

Coatings (organic and inorganic) are found in every aspect of today's society, on cans, cars, houses and other buildings, bridges, ships, pipes – the list goes on.

WOOD GROUP INTEGRITY MANAGEMENT (WGIM), as an independent entity, utilises our extensive knowledge of the many and varied coating types which exist, their performance, what they're made of and their characteristics to select the most suitable coating system for the intended environment based on up-to-date data and field experience.

Successful coating performance begins with the correct coating selection.

### Specification & Procedures

Vague specifications and inexact procedures invariably produce poor results.

WGIM has experience in developing precise specifications for standard as well as specialised applications. Sound specifications and procedures will reduce, rework and ensure extended life.

### About WGIM

As a company, WGIM are not affiliated with any coating manufacturers, suppliers or painting contractors. It is this independence that enables us to provide unbiased and uncompromised services to industry.

### WGIM's Services

WGIM's comprehensive services includes:

- Coatings consultancy and failure analysis.
- In-process inspection of surface preparation and coating applications.
- Laboratory testing procedure preparation and management.
- Expert witness.

- Corrosion surveys and coating system evaluations.
- Coating and environmental specifications.
- Contract document development.
- Contract management.
- Materials/design engineering support services.
- Coating and environmental training.
